

Day-15: Server & Services

→ If a device gives out services then it is called server.

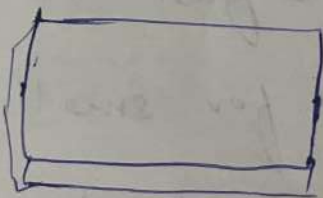

→ The device which receives the service is called client.

* A website is created by full stack developer. I'm hosting the website in my Laptop.

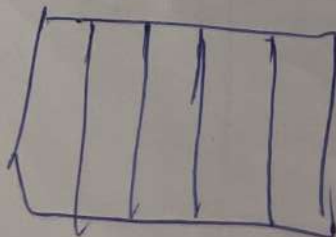

If we are going to host services then we need to use high end computers. Those are called servers.

Rack server.

Tower server.

Blade server.

→ we need to know which OS we have to implement.

LINUX OS.

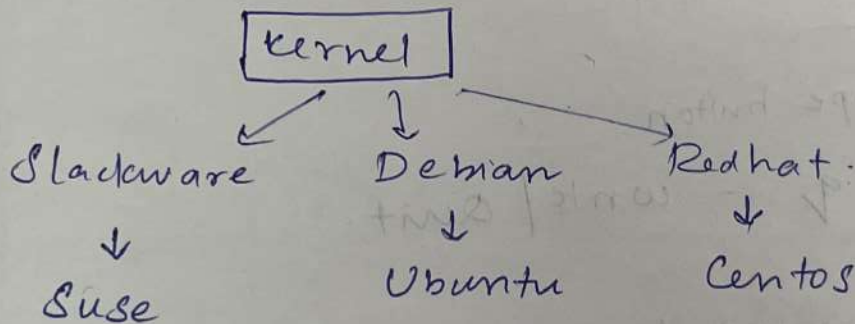

OS → very important part → KERNEL

Collection of programmed files.

It has core program.

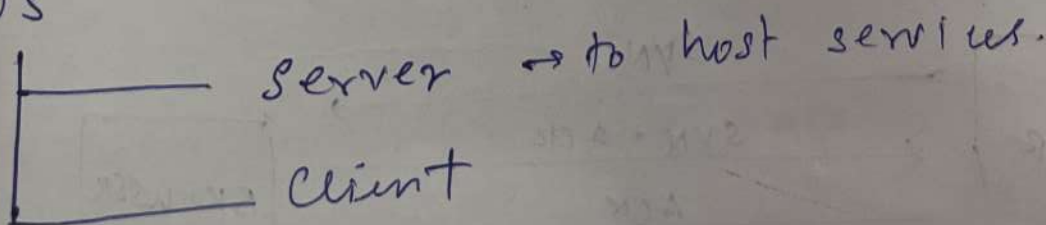

Linux Torvald founded kernel and gave it as open source.

So with a kernel we can build OS & customize it.

The place where we kept all the servers are called as Data centre.

OS

Assigning IP in Linux: LAB.

etc/systemconfig/network-scripts/ifcfg-eth0

In this file only
we can config ip.

→ No use here to
edit this file.

→ To edit this use vi (editor).

i - insert

Escape button.

wq - write / quit.

→ windows OS - IIS

(Server) → linux - Apache / Tomcat.
(Server OS) (Service)
